

# How Cyber Secure Is Your Business?

Cyber Security is the practice of protecting systems, networks and programs from digital attacks.

These cyber attacks are usually aimed at accessing, changing, or destroying sensitive information, extorting money from users or interrupting normal business processes.

Implementing effective cyber security measures is particularly challenging today because there are more devices than people, and attackers are becoming more sophisticated in their approach.

**29**  
billion

is the estimated cost per year to Australian businesses due to cyber crimes

**53**  
percent

of the cost being paid is detection and recovery

**23-51**  
days

is the number of days to resolve a cyber crime

At OAS Technology, we partner with Cisco, world leader in Cyber Security. Our package provides:

**Web & Internet Security** provides the first line of defence against threats from the internet wherever users go. The system provides complete visibility into internet activity across all devices and locations and blocks threats before they even reach your network.

**Email Security** provides advanced threat capabilities additional to traditional email security features. The system analyses emails for malicious hyperlinks or attachments and blocks attacks.

**Computer Security** prevents cyber attacks and rapidly detects, contains and remediates malicious files on endpoints. This service has the capability to continuously analyse all static and dynamic files.

**Multi-Factor Authentication** provides secure access to your applications and data by verifying the user's identity through using a second source of validation like a phone or token.
